

Sven Berberich

Fullstack Engineer | AI, Space & Geospatial Tech

Amsterdam, Netherlands • svberberich@gmail.com • +31 6 23884599

linkedin.com/in/sven-berberich • github.com/NoxDecima

Summary

AI and fullstack Engineer with a strong background in building scalable AI-driven platforms and machine learning systems across multiple domains such as earth observation and finances. Experienced in the full ML lifecycle—from prototyping to production—using Python, Rust, and cloud-based infrastructure (GCP/AWS). Proven ability to turn complex datasets into actionable insights, leading cross-functional projects from concept to deployment. Passionate about developing practical AI solutions that transform real-world industries through data, optimization, and intelligent automation.

Skills

Programming Languages: Python, TypeScript, Kotlin, Java, Scala, Rust, C++

Frameworks/Tools: React, FastAPI, LangChain, Docker, Linux, Git, Arduino, Electron

Cloud/Infra: AWS, GCP

Databases: PostgreSQL, DuckDB, No-SQL

Other: Spark, PyTorch, TensorFlow, QGIS, Blender, Arduino, Raspberry Pi

Work Experience

CTO & Lead Data Engineer, Meteory / MapHub.co

Jan 2023 – Present

Amsterdam, Netherlands

- Architected and deployed fullstack applications integrating multi-cloud environments (AWS/GCP) with diverse services, enabling seamless geospatial data processing and visualization for public/private users.
- Led core tech decisions as late co-founder and CTO, building scalable backend/frontend stack with Python/FastAPI, React, Docker, and LangChain for interactive mapping and AI-driven features.
- Developed AI models utilizing satellite based remote sensing data to predict ground conditions.

Intern Radar Department, TNO

Aug 2022 – Dec 2022

The Hague, Netherlands

- Developed a image segmentation model for ground-to-space ISAR radar images of satellites using few-shot fine-tuning, considerably improving performance on limited datasets.
- Co-authored a paper that was published in the IET Radar, Sonar & Navigation journal.
(<https://doi.org/10.1049/rsn2.12516>)

Co-Founder & Algorithm Engineer, Hermes Asset Management

Sep 2020 – Dec 2022

Nijmegen, Netherlands

- Co-founded AI-based stock trading algorithm, gaining early entrepreneurship and fintech insights.

Projects

Zettel – Note Processing AI Agent

Dec 2025

github.com/NoxDecima/Zettel

- Built personal AI agent for intelligent note management using LangChain and modern stack.

MapHub – Geospatial Data cloud

Mar 2025 – Jan 2026

github.com/maphub-co/maphub-compose

- Developed a geospatial cloud and hosting platform with simple docker compose based deployment option.

Smart Home controller – Arduino

Jan 2018 – Dec 2024

Krefeld, Germany

- Build and developed a Arduino based Smart Home controller that uses sensor data to control radiators.

Chief of Education, Study Association CognAC

Sep 2019 – Aug 2020

Nijmegen, Netherlands

- Led study-related services as board member, gaining organizational and leadership skills.

Education

Exchange semester, 関西外大 (Kansai Gaidai)

September 2023 – January 2024

枚方市, 日本 (*Hirakata, Japan*)

MSc Data Science, Radboud University

September 2021 – January 2024

Nijmegen, Netherlands

BSc Artificial Intelligence, Radboud University

September 2017 – September 2021

Nijmegen, Netherlands

Abitur (High School Diploma), Berufskolleg Uerdingen

Summer 2014 – Summer 2017

Krefeld, Germany

Focus: Computer Science & Mathematics

Languages

German (Native), English (C2), Japanese (N4 official, N2 unofficial), Dutch (A1), Spanish (A1)
